

CLINICAL PHARMACOGENOMICS RESEARCH GROUP

Group Members: Dr Sadaf Saleem, Dr Naila Rafiq, Dr Kausar Perveen

Biochemistry has enjoyed an intimate relationship with medicine illuminating many aspects of human health and diseases. It helps us to understand the chemical aspects of biological processes, plays a huge role in the development of novel new scientific approaches. The Clinical Pharmacogenomics Group aims to personalize medicine by studying DNA variations to better target a drug, or its dose, to improve health and prevent toxic reactions.
